Backlight Unit

The backlight system is an edge lighting type with 4 white LEDs.

 $(T_a=+25^{\circ}C)$

ltem	Symbol		Values		Unit	Remark

Current	I_B	-	80	-	mA	Note 1	
Power Consumption	P_{BL}	-	240	-	mW	Note 2	

Note1: 4 LEDs are connected in parallel; each LED's current consumption is 20mA.

Note2: Where I_B = 120 mA, P_{BL} = I_B x V_{BL} , V_{BL} is backlight forward voltage.

Note 2: Definition of optical measurement system

The optical characteristics should be measured in a dark room with ambient temperature T_a =+25.The optical properties are measured at the center point of the LCD screen after 5 minutes operation. (Equipment: Photo detector TOPCON BM-5A or BM-7 /Field of view: 1° /Height: 500mm.)

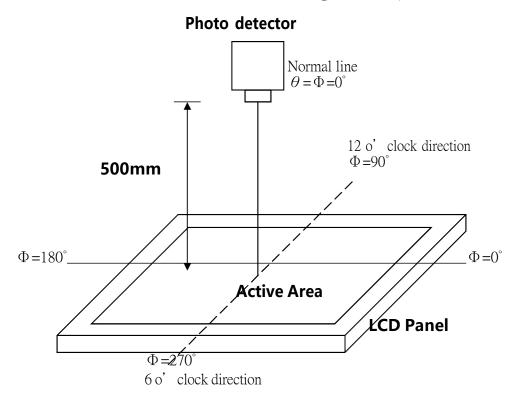

Fig. 3 Optical measurement system setup

Note 3: Definition of response time

The response time is defined as the LCD optical switching time interval between "White" state and "Black" state. Rise time (T_{on}) is the time between photo detector output intensity changed from 90% to 10%, and fall time (T_{off}) is the time between photo detector output intensity changed from 10% to 90%.

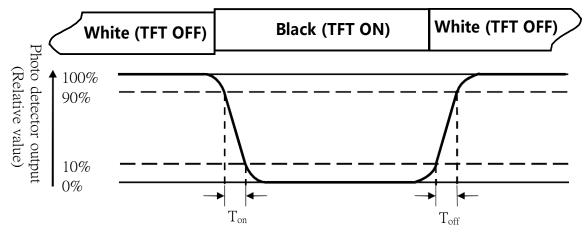

Fig. 4 Definition of response time

Page: 7/15

Note 4: Definition of contrast ratio

Contrast ratio (CR) Luminance measured when LCD on the "White" state Luminance measured when LCD on the "Black" state

Note 5: Definition of luminance

Measured at the center area of the panel when LCD panel is driven at 'white' state.

Note 6: Definition of color chromaticity (CIE1931)

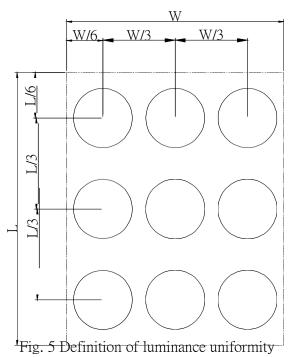

Color coordinates measured at the center point of LCD when panel is driven at "White", "Red", "Green" and "Blue" state respectively.

Note 7: Definition of luminance uniformity

To test for uniformity, the tested area is divided into 3 rows and 3 columns. The measurement spot is placed at the center of each circle as below.

Luminance Uniformity (U_L) =
$$\frac{L_{min}}{L_{max}}$$

L----Active area length W ----Active area width

 L_{max} : The measured maximum luminance of all measurement position.

 L_{min} : The measured minimum luminance of all measurement position.

Note 8: Definition of Flicker

Flicker is the pattern usually used to describe the visual sensation produced by a rapidly varying light intensity. There should be no visible flicker in normal direction of the display when the following figure are loaded.

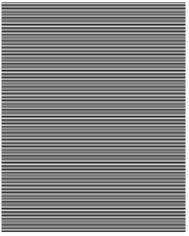

Fig.6 Flicker checker pattern

Note9: Definition of crosstalk

There should be no visible in normal direction of the display when the following figures are loaded.

5. Reliability Test Items

Test Items	Test Conditions	Remark
High Temperature Storage	+80°C±3°C for 240 hours	-
Low Temperature Storage	-30°C±3°C for 240 hours	-
High Temperature Operation	+70°C±3°C for 240 hours	-
Low Temperature Operation	-20°C±3°C for 240 hours	-
High Temperature and Humidity Operation	+60°C±3°C, 90%±3%RH max. for 240 hours	-
Thermal Shock	-30° C /0.5h ~ $+80^{\circ}$ C /0.5h for a total 100 cycles, Start with cold temp and end with high temp	-
Vibration Test	Frequency range:10~55Hz Stoke:1.5mm Sweep:10Hz~55Hz~10Hz 2 hours for each direction of X. Y. Z. (6 hours for total)	-
Mechanical Shock	100G 6ms,±X, ±Y, ±Z 3 times for each direction	-
Package Vibration Test	Random Vibration: 0.015G²/Hz from 5-200Hz, -6dB/Octave from 200-500Hz 1 hour for each direction of X. Y. Z. (3 hours for total)	-
Package Drop Test	Height :76cm(Weight ≤ 10kg); 60cm(Weight>10kg) 1 corner, 3 edges, 6 surfaces	-
Electro Static Discharge	\pm 2KV, Human Body Mode, 100pF/1500 Ω	-

Note1: During the display practical test under normal operation condition, there shall be no change, which may affect display function.

Note2: Before functional check, the test sample requires a 2 hours storage time at room temperature.

6. Handling Precautions

Safety

6.1.1. The liquid crystal in the LCD is poisonous. DO NOT put it in your mouth. If the liquid crystal touches your skin or clothes, wash it off immediately using soap and water.

Handling

The LCD and touch panel is made of plate glass. DO NOT subject the panel to mechanical shock or to excessive force on its surface.

Do not handle the product by holding the flexible pattern portion in order to assure the reliability

Transparency is an important factor for the touch panel. Please wear clear fingersacks, gloves and mask to protect the touch panel from finger print or stain and also hold the portion outside the view area when handling the touch panel.

Provide a space so that the panel does not come into contact with other components.

To protect the product from external force, put a covering lens (acrylic board orsimilar board) and keep an appropriate gap between them.

Transparent electrodes may be disconnected if the panel is used under environmental conditions where dew condensation occurs.

Property of semiconductor devices may be affected when they are exposed to light, possibly resulting in IC malfunctions.

To prevent such IC malfunctions, your design and mounting layout shall be done in the way that the IC is not exposed to light in actual use.

Static Electricity

Ground soldering iron tips, tools and testers when they are in operation.

Ground your body when handling the products.

Power on the LCD module BEFORE applying the voltage to the input terminals.

DO NOT apply voltage which exceeds the absolute maximum rating.

Store the products in an anti-electrostatic bag or container.

Storage

Store the products in a dark place at +25°C±10°C with low humidity (65%RH or less).

DO NOT store the products in an atmosphere containing organic solvents or corrosive gas.

Cleaning

DO NOT wipe the touch panel with dry cloth, as it may cause scratch.

Wipe off the stain on the product by using soft cloth moistened with ethanol. DO Not allow ethanol to get in between the upper film and the bottom glass. It may cause peeling issue or defective operation. Do not use any organic solvent or detergent other than ethanol.
